LearningFront Scenarios

LearningFront Community. LearningFront provides a learning community designed specifically for people who want to contribute and acquire skills, knowledge, and resources to help low performing and trailblazing schools. This focus is what makes LearningFront's community different from other online social media or professional networking websites.

LearningFront Scenarios. When people join LearningFront, they create a profile that summarizes their professional backgrounds. Then, they form relationships by inviting or locating trusted colleagues to network with them individually or in teams. A LearningFront member's network consists of colleagues, colleagues of colleagues, teams, and the people they meet online, linking them to a vast number of qualified professionals and experts. ***Then, by using online LearningFront social media and professional tools:***

-  A middle school mathematics teacher forms a team with other middle school teachers in the same and other schools to co-create and share effective teaching strategies for problem-solving and completes online professional development with a content expert to improve mathematics assessments.
-  The sales trainer who has found the secret of making disinterested people interested coaches a high school teacher whose classroom has gotten out of control.
-  Teachers in a low performing elementary school plan, teach, assess, analyze, and share WikiTasks of promising data-driven lessons to demonstrate progress toward meeting AYP targets.
-  First-year teachers develop standards-based lessons for their classes and send them to a staff developer for feedback. Then, the staff developer returns coaching tips without the need for meetings or email trails.
-  A team of principals and teachers develops, applies, and shares WikiTask templates for demonstrating results of lessons for their school's teacher evaluation system that requires evidence of student learning in all subject areas.
-  A parent/guardian develops a lesson for teaching his or her children how to save and invest their allowances and sends messages to colleagues to encourage their children to try the lesson and share results.
-  Virtual classroom teachers send lessons to parents to support their children in the home, seek their ideas for home-based activities, and post the lessons as WikiTasks for parents throughout a local school district.
-  A teacher educator adapts classroom instructional materials and research findings into Learning Layouts for delivery through a blended face-to-face and online professional development program.
-  A high school department chairperson identifies priority Common Core State Standards for an instructional unit, supports teachers to co-create lessons to achieve the standards, and, then, makes WikiTask lessons with results for worldwide application and feedback.

LearningFront makes it possible for low performing and trailblazing schools to draw upon experts around the world to help solve tough problems and create new and better ways of learning.

Invitation to Join LearningFront!

LearningFront Mission. LearningFront is dedicated to advancing the frontier of learning! And it has a track record of helping urban low-performing and trailblazing schools to increase student achievement on classroom and state assessments.

LearningFront Vision. Imagine being part of a global learning community that ***changes the learning process from one teacher for many learners to thousands of teachers for each learner.*** And where you can collaborate with people dedicated to improve teaching, training, and learning.

Connect with colleagues individually and in teams...

Develop lessons, assessments, data analyses, and more...

Clone best practices, coaching feedback, and results...

Use wikis to co-create, edit, and share authentic projects...

Participate in online professional development...

LearningFront colleagues and tools will help you to **increase results** on standardized tests, training measures, and authentic assessments.

LearningFront is unique because it combines social media and professional development tools for teaching and learning any subject, anytime, anywhere with any adult using a computer connected to the Internet. It breaks down the geographic, demographic, and administrative barriers that have traditionally kept teachers isolated from each other. LearningFront professional tools have been used to improve teaching and student achievement in schools striving to meet NCLB, state, and blue ribbon standards; to deliver online teacher education programs; and to help individuals preparing for state tests for alternative teacher certification.
